

Sree Charan Damodara

Senior Full Stack Engineer

Dallas, TX | (660) 541-2885 | sreecharan.damodara@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio: add live URL](#)

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 10+ years building scalable React, Angular, Vue, TypeScript, Node.js, Java, GraphQL, and REST systems across fintech, retail, networking, and enterprise platforms. Strong in micro-frontends, shared component libraries, API design, production debugging, observability, testing, and platform work that helps teams ship faster with fewer regressions.

TECHNICAL SKILLS

Front-end	React.js, Angular, Vue.js, Next.js, TypeScript, Redux Toolkit, Micro-frontends, Module Federation, SSR, Tailwind, SASS/LESS, D3.js, Ag-Grid
Back-end & APIs	Node.js, Express.js, Fastify.js, Java, GraphQL, REST API design, Kafka, WebSockets, Microservices, Event-driven systems, caching strategy
Cloud / DevOps	AWS, Azure, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, CI/CD, Vault, Nginx, Vercel
Databases / Quality	PostgreSQL, MongoDB, Redis, Cassandra, Elasticsearch, BigQuery, DynamoDB, Playwright, Cypress, Jest, RTL, SonarQube, Lighthouse
Observability	Datadog, Splunk, New Relic, on-call incident response, root cause analysis, performance profiling

EXPERIENCE

Full Stack Software Engineer | Fidelity, Westlake, TX | Feb 2025 - Present

Build shared Angular and Vue components inside a micro-frontend platform used by several product teams; support the Java/GraphQL services behind them and participate in production on-call.

- Build reusable Angular and Vue component patterns that reduce duplicated UI work across teams.
- Shape Java and GraphQL service contracts so front-end teams can integrate consistently and safely.
- Triage production issues with Splunk and Datadog, document root cause, and improve coverage through unit and Playwright E2E tests.

Stack: Angular, Vue.js, TypeScript, Java, GraphQL, Playwright, Datadog, Splunk

Senior Front-End Engineer | Bank of America, Plano, TX | Aug 2024 - Feb 2025

Led front-end work on high-traffic internal banking applications and set reusable UI/tooling patterns for the team.

- Moved tooling to Vite and restructured Webpack configuration, reducing build times by roughly 20%.
- Led React 18 / Next.js feature delivery with reusable CKEditor and Kendo UI integrations.
- Raised consistency through code review standards, shared patterns, and maintainable component design.

Stack: React 18, Next.js, Redux Toolkit, Vite, SCSS, Kendo UI, Webpack

Software Engineer III | Walmart, Dallas, TX | Jan 2022 - Aug 2024

Owned the front end of an energy management platform end to end, plus the Node.js layer feeding real-time IoT data from stores.

- Led Node.js 14 to 18 migration, resolving dependency conflicts and delivering with zero production downtime.
- Built and maintained a Node.js BFF that consolidated upstream services into one API surface for the UI.
- Implemented Kafka and WebSocket streaming for live device readings and status updates across store locations.
- Built Cypress E2E automation and raised Jest coverage to about 80%, reducing regressions and meeting SonarQube release gates.
- Improved Core Web Vitals through Lighthouse-driven optimization, bundle tuning, and responsive layout work.

Stack: React, Redux, Node.js BFF, Kafka, WebSockets, Kubernetes, Docker, Cypress, Jest, Power BI

Software Engineer II / React Developer | 7-Eleven, Irving, TX | Feb 2020 - Jan 2022

Built SSR foundations, shared component library pieces, and Node/AWS APIs that several product squads shipped on top of.

- Created reusable server-side rendering setup adopted across projects, improving development efficiency.
- Cut page load times by roughly 45% using bundle splitting, lazy loading, and browser caching strategy.
- Designed REST and GraphQL APIs on Node.js, Express, and AWS Lambda; strengthened JWT-based access controls.
- Led move to Webpack 5 with Module Federation, improving build speed and shared-module reuse.

Stack: React, Next.js, TypeScript, Node.js, AWS Lambda, GraphQL, MongoDB, Redis, New Relic

UI Engineer | HPE Aruba, Santa Clara, CA | Feb 2018 - Feb 2020

Built reusable React components, D3 visualizations, and API/data integrations for network management dashboards.

- Designed reusable React components and D3.js visualizations that unified data presentation across products.
- Added Redis caching and Elasticsearch-backed search, improving dashboard data retrieval speed by roughly 50%.
- Reached about 80% coverage with Jest and React Testing Library and built APIs with Fastify/Express.

Stack: React, D3.js, MobX, Fastify, Express, PostgreSQL, Cassandra, Elasticsearch, Redis

UI Engineer | State Street Bank and Trust, Quincy, MA | Nov 2015 - Feb 2018

Delivered full-lifecycle front-end work on a regulated financial reporting application.

- Developed React/Redux application flows with REST API integration and SQL-backed data workflows.
- Introduced Error Boundary handling, reducing user-reported UI errors by roughly 35%.
- Owned build, test, debug, and release tasks across the full SDLC.

Stack: React, Redux, SQL, React Router, Axios

SELECTED PROJECTS

Simple Rummy: Multiplayer Indian Rummy PWA with authoritative Socket.IO server, Redis-backed sessions, configurable table rules, scoring, and reconnect support. 100+ active users since launch.

MyXI: Fantasy cricket platform with React front end, Express API, PostgreSQL schema, JWT authentication, role-based permissions, live score sync, and per-contest leaderboards.

SimpleSplit: Expense-splitting app on an Expo/React Native codebase with Supabase row-level security, role-based group access, split allocation engine, and Playwright E2E coverage.

Project live links are intentionally centralized through the portfolio rather than listed individually.

EDUCATION

Master's in Applied Computer Science, Northwest Missouri State University, Maryville, MO

Bachelor's in Information Technology, Jawaharlal Nehru Technological University, Kakinada, India
